

## **Workshop „Introduction into document generation with Enterprise Architect“**

---

Duration: 1 Day, i.e. 8h – ad hoc or together with the basic course “UML with Enterprise Architect

### **Target of the workshop:**

Understanding of the documentation concept and the efficient usage of the available features

### **Needed qualification:**

Some practical experience with Enterprise Architect

### **Needed infrastructure:**

Beamer, flipchart; participant equipped with PC or notebook with EA7 testing version or licenced version installed (Attention: Lite- or Destop-Version of EA is not sufficient!)

## **Content**

- Concepts provided by EA for document generation
  - Purpose and Usage of the HTML-Output
  - Possibilities to manipulate the content of HTML-Output
  - Structuring the Repository versus structuring documents
  - Purpose and Usage of the rtf-document generation
- Source selection versus virtual document collection
- Using the Template Generator
  - Constant text and formatting
  - Inserting data
  - Usage of tables
- Collecting basic output into a master document (MS-Word®)
  - Formatting
- Selective compilation of a master document by using rtf-bookmarks
- Special documents – requirements, test monitoring, implementation report, testing-report
- Additional import- / export features
- Example document generation with a user model – please provide your practical model example

Please note: An introduction into the automation interface of EA is not included in this workshop!
