

SparxSystems CE Reseller.

Making your vision a reality.

With over **one million** active licenses, **Enterprise Architect** from SparxSystems is one of the leading tools for model-based development. We at SparxSystems Central Europe distribute the SparxSystems Product Suite in Europe and offer **comprehensive services** such as support and training.

The **SparxSystems Product Suite** consists of:

ENTERPRISE ARCHITECT

for modelling

Pro Cloud Server

as integration platform

Prolaborate

for visualization and as interface between modellers and management

SparxSystems CE.

Your benefits.

As a **reseller** of the SparxSystems Product Suite, you are an important partner for us. Therefore, take advantage of the **benefits for you and your customers** and

... maximize your customer relationship

At SparxSystems Central Europe, you will receive all the support you need for successful **customer care**. For product inquiries, our **sales team** checks the installation base and whether the requested configuration covers the customer's requirements. Our team will also **assist** you in **quoting** Pro Cloud Server and Prolaborate, as well as SaaS and PaaS solutions.

... you will receive timely offers as well as free support for your customers

At SparxSystems Central Europe you will find **extensive online resources** and you can contact us directly at vendor@sparxsystems.eu with your question at any time. As a reseller, you will always receive our **offers promptly** and can offer your customers **product support from Europe at no additional cost**. You and your customers also have the option to request **licensing or product demonstration inquiries** from us.

... enjoy comprehensive support for you & your customers

If required, **premium support packages** with telephone support and **guaranteed as well as fast response times** are available to your customers. In addition, **our experienced staff** will help your customers with any question they may have regarding the installation of the SparxSystems Product Suite. We will also be happy to support your customers for questions regarding support or **installation** for the application areas MBSE & EAM.

... benefit from trainings and customized concepts for your customers

Your customers will learn to use the **full potential of Enterprise Architect** in an easy and fun way through **targeted trainings** on various topics related to modelling. We are constantly expanding our **extensive range of training courses** and are happy to adapt them to the individual requirements of your customers.

... pass on our consulting services to your customers as an additional benefit

As part of our comprehensive services, SparxSystems Central Europe also provides consulting support. With a well-graded **support catalog**, users of the SparxSystems Product Suite are provided quality support in their day-to-day activities.

25 years experience.

25 years experience

SparxSystems has been developing the Enterprise Architect modelling platform for over 25 years. Enterprise Architect now offers over **80 standardized modelling languages**, which are used for software and systems development, enterprise modelling and many other business-critical endeavors. In particular, Enterprise Architect is a highly-effective tool for "**Enterprise Architecture Management**" (EAM) and "**Model-Based Systems Engineering**" (MBSE).

EAM & MBSE

In order for companies and organizations to fulfill their strategy and business objectives, a cohesive view of the company's operations is necessary. **EAM** makes the **interaction between business and IT** visible. The models created in the process allow transparency and simplify communication.

In "Model-Based Systems Engineering" (**MBSE**), the information about a system under development is based on models rather than documents. For some years now, MBSE has been evolving into the even more comprehensive **Digital Engineering**.

Prolaborate & Pro Cloud Server

With **Prolaborate**, model information becomes easy to understand even for people who do not model themselves, thanks to its excellent **visual presentation**. This improves communication during model development. At the same time, information from the models is made accessible via web browsers. Prolaborate offers **attractive dashboards** and **meaningful impact analyses**, to name a few features.

In the background, the **Pro Cloud Server** ensures the reliable connection of other existing tools such as **Jira** or **Confluence**.

Shared path.

About SparxSystems Central Europe

SparxSystems Pty Ltd (Australia) was founded in 1996 and is the developer of **Enterprise Architect**, a **globally successful UML modelling platform**. Enterprise Architect is used for designing and building **software systems**, for **business process modelling** and for modelling any process or system. Enterprise Architect is an easy-to-understand, **teamwork-oriented modelling environment** that helps organizations analyze, design and build accurately traceable and documented systems. With the help of this tool, companies are enabled to **centrally collect and represent** the often very distributed knowledge of teams and departments.

In order to offer the numerous customers the best service around Enterprise Architect in their language and time zone, SparxSystems Software Central Europe was created in 2004 to **support** the **European region** with **license acquisition, training and consulting**.
